What are add-ons?

Add-ons are third party software that are not included in WoW install discs. They are often used to help alter the players experience for the better in the game. For example trying to find your way around the world of Azeroth may become difficult if you have to just rely on your simple map. But add-ons can often show you the location of the things you have to do to complete your objectives for the quest

Where Do I get them?

Best Place is www.curse.com. I have found that the manual approach is better to install them. Now there is no What do I get section cause it is up to you to get the ones that sound ok to you. I use Carbonite and will use that for my example.

How do I install them?

<http://wow.curse.com/downloads/wow-addons/details/carbonite-quest.aspx>

This link takes you directly to the carbonite quest download. Now it is important that you search for the ones that you may need or just to see what is out there and what they do.

Please look for the wrath icon near the name of the file so to know it is compatible with WOTLK

Select download and then your download type.. I prefer manual and for the purpose of this document I use manual.

If you have problems here is the actual link to the file PLEASE unless you have issues don't use this link as it may change

<http://mediabeta.curse.com/Curse.Projects.ProjectFiles/5381/303014/CarboniteQuest1.400.zip>

It is about 2.7 mb in size

Then after you download please open or extract the folder to your desktop inside you will find three files. Two are documents regarding the use of the program and the other is the program folder.

Copy the folder inside named carbonite.. ** notice if you open the folder you copied it has the program files in it like carbonite.xml ** wow needs to see that file as soon as it opens the folder. So if you copied Carbonite and in that folder had a folder called Carbonite then if you opened that folder you see carbonite.xml you got it WRONG. You need to copy the second folder INSIDE.

Once you do that browse to the wow Install path the go interfaces than add-ons... eg

C:\Program Files\World of Warcraft\Interface\AddOns

Copy folder in here.

Then open WOW

After you log in you select your char.. ON THE BOTTOM Corner of your screen is a button called ADDON. Make sure that carbonite is enabled

Then load you toon and load you map.. lol it is sweet isn't it?

Can I use more than one?

Yes Just follow those instructions and rinse and repeat for all the addon you want.

Have fun
